INDUSTRY-SPECIFIC SOLUTIONS

FOUNDRIES

Intelligent solutions for a tough environment.

IPR: Your partner in foundry technologies.

To the fore in all manufacturing processes

Heat, moisture and dirt – IPR knows all too well about the extreme conditions prevailing in the foundry industry and the related requirements. With our gripper systems, robot transport units and fully automated manufacturing cells, we accompany all operations from chill, sand and precision casting, die casting and casting with salt core inserts through to the handling and assembling of delicate components or heavy molds.

Competence in equipment construction and as a system integrator

Our technological and industry knowledge also makes us a dependable partner in foundry equipment construction. We use our innovative solutions in fitting out equipment constructors and plant manufacturers all over the world. For our customers, we also devise and install complete cells for process automation in low-pressure casting and die casting processes.

We support you in various casting processes:

DIE CASTING

- Salt core insert | NEW
- Aluminum
- Magnesium

Experts in salt core handling.

Use our innovative gripper solutions to dependably operate your salt core handling assignments.

Thanks to our gripper technology successes across the most varied of industries, we are especially skilled in rupture-free extraction of salt cores from core casting machines and in their insertion into die-casting molds.

LOW-PRESSURE CASTING

- Sand casting incl. sand core handling
- Chill casting
- Precision casting

Bespoke solution competence.

Our different specialist teams implement the full process from devising ideas through to actual design and production. In so doing, we develop customized individual solutions based on our standard program. This results in a reduction of design and delivery times – with a similar reduction in costs.

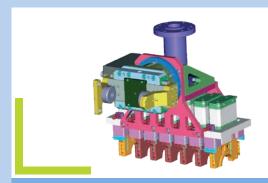

In many countries throughout the world, IPR is directly involved both in development and production technologies of supplier industry companies, such as KS Huayu AluTech, Mahle and Nemak, and of car manufacturers, such as Audi, BMW, Daimler, Ford, GM and VW.

Customized gripper as per casting process.

DIE CASTING

Magnetic bearing-support insert gripper

Process Aluminum die casting

Customer BMW

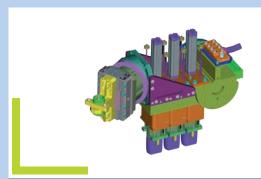

Function Inserting the bearing supports into the

die-casting machine and extracting the

ped plate

Benefit Reliable handling of cold and hot bearing

supports using magnetic grippers

Bushings load and casted part unload gripper

Process Aluminum die casting

Customer Škoda

Function Inserting bushings into the die-casting

nachine and extracting the finished

cylinder crankcase

Benefit No need for supply lines thanks to

internal media transfer

Conveyor unload and furnace feed gripper

Process Magnesium die casting

Customer BMW

Function Handling the sprue and

of cylinder crankcases

Benefit Multifunctional

Load and unload gripper

Process Magnesium die casting

Customer BMW

Function Inserting and holding cylinder parts in the

die-casting machine and extracting the

finished cylinder crankcase

Benefit Putting in the inset under high pressing

forces without any additional robot loading

LOW-PRESSURE CASTING

Coresetter for automated handling

Customer BMW

Function Fitting the finished core package

in the mold

Benefit Raised level of availability due to

precise gripper measuring and setting

Frame-gripper for sand cores

Customer Indianapolis Casting Company

Function Extracting sand cores from a core shooter

d re-positioning them overhead

Benefits Optimum supply line protection brought

Frame construction for considerable

stability

Assembly- and turntable for sand cores

assembled here into the core package. The Top Core is rotated by 180° for the final joining process. This prepositions the core package ready for pick-up by the coresetter.

Customized gripper as per casting process.

LOW-PRESSURE CASTING

Sand core insert gripper

Customer KS Huayu AluTech

Function Inserting water jacket cores

into a chill mold

Benefit Handling loosely combined sand cores

Unload gripper

Customer KPSNC

Function Extracting cylinder heads

from the chill molo

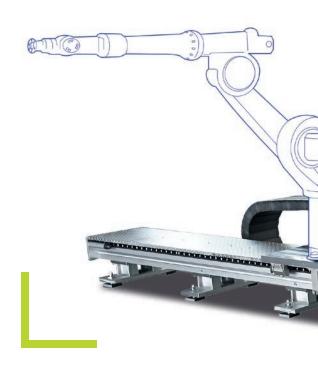

Benefits • Heat resistant and dirt repellent

Process-assured handling with positive-locked grippers

Robot transport units (RTUs)

In view of the extreme environmental conditions, our robot transport units for the foundry industry optionally come with an integrated air curtain using seal air to stop any rail contamination. Furthermore, a cover can protect the drive and control system of the unit and at the same time make it accessible.

Based on a basic module – two meter length with a one meter travel path – the IPR robot transport units are nearly endlessly extendable. Ten different aluminum or steel models are available with maximum payloads of up to 12 t.

HANDLING

Crankcase handling gripper

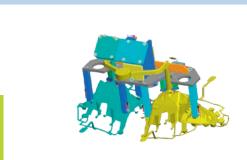

Customer VW Chir

Function Handling cylinder cranl

Benefits

Raised level of availability

Long-stroke gripper with mechanical gripping force safeguard

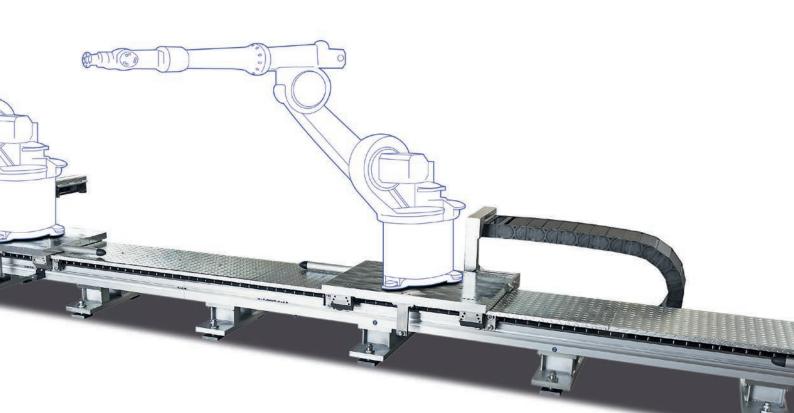

Multi-gripper for strut domes

Customer Daimler

Function

- Extraction of cast part from die-casting machine with a single jaw gripper at the sprue
- 2. Insertion into de-burring press
- **4.** Extraction of finished parts from de-burring press using vacuum or parallel grippers, sprue extraction using the single jaw gripper

Benefit Multifunctional
